Experience

Rakuten Group, Tokyo, Japan

May 2025 – Present

Senior Software Engineer (Design Lead)

- Built a **Google ADK-based multi-agent QA automation POC** that transformed complex multi-part Excel test specifications into normalized CSV test cases and generated **100+** randomized payloads using a golden dataset and rules-based mutation logic, covering for **Authorize, DirectCapture, Modify and CancelOrRefund APIs**
- Integrated **listener notification logic** for Rakuten online payments, improving worst-case successful payment response time for about **2% of cases from 6 minutes to 11 seconds**.
- Implemented Jenkins job to perform **Blue-Green deployment via internal facing NLB** for the payment gateway instances that are used by internal services
- Migrated from **Jenkins Dependency Check (5.5.0) to Gradle Dependency Check (12.8.0)**, integrating **NVD API Key** and **OSS Index API key** to improve CVE data retrieval reliability and reduce rate-limit-related failures in dev CD pipelines to **zero**.
- Leveraged **Claude MCP server integration** across **Confluence, Jira, and Bitbucket** to automate repetitive work-flow tasks, reducing manual effort in Sprint Planning, Jira creation, ticket maintenance, and timesheet logging.
- Served as **Scrum Master** for a 3-member Payment Gateway Core team, improving sprint execution through agile facilitation, velocity tracking, and stakeholder coordination.

TakeMe, Tokyo, Japan

Aug 2022 – May 2025

Full Stack Software Engineer

- Delivered **end-to-end Docomo Pay (dbarai) and coupon service integrations** across React frontend and Java backend APIs, contributing approximately **5.2% of platform revenue**. Handled incident investigation, bug fixes, and Japanese technical documentation review for payment integrations.
- Led full-stack delivery of the **B2C booking platform and admin systems** using **Angular 16, React, and Spring Boot**, covering customer reservations, restaurant operations, and internal management workflows.
- Reduced **LCP from 6.3s to 1.3s** by eliminating redundant API calls, adding lazy loading and skeleton screens, and generating multi-resolution images using AWS Lambda.
- Affiliate partnership feature development and above optimisations increased organic traffic from approximately **100 to 1,200 users/day** within one year.
- Built a **Japanese-Compliant invoice generation and archival system** with 10-year storage on AWS S3, ensuring audit readiness and regulatory compliance.

Delhivery Ltd., India

Jan 2020 – Aug 2022

Senior Software Engineer

Apr 2022 – Aug 2022

- Scaled a warehouse dispatch microservice to handle **4x higher load** using event-driven architecture by improving API performance by **70%** through optimized SQL queries and indexing. Performed load testing with **JMeter** to validate system behavior at **5x traffic**.
- Led a engineering group of 2 developers, prepared UML and AWS architecture diagrams, and supported knowledge transfer for return last-mile microservice.
- Built an **OTP-based delivery verification system** for secure proof-of-delivery workflows.

Software Engineer

Jun 2020 – Mar 2022

- Developed a **fault-tolerant call masking system** to ensure secure communication and privacy between delivery agents and customers.
- Improved call success rate by **85%** using fallback routing, Redis pipelines, and third-party carrier switching.
- Designed a PIN-based number allocation flow that reduced failures and improved reliability of virtual number assignment.

Intern (SDE)

Jan 2020 – Mar 2020

- Worked with platform teams on AWS-based services and learned serverless and event-driven architecture patterns.
- Built basic payment status check pages for internal payment-related workflows using Python and Node.js.

Technical Skills

AI / Automation: Google ADK, Claude MCP Server integration

Languages: Java, TypeScript, Python, C++, Shell

Frameworks: Spring Boot, Angular, React, Django

Databases: DynamoDB, Redis, Aurora MySQL, PostgreSQL

Cloud & DevOps: AWS (Lambda, ECS, S3, Route53, CloudFront, NLB), Jenkins, GitHub Actions, CodeBuild

Testing Tools: Karate, JMeter, PyTest, Cypress, BrowserStack

Monitoring: AWS CloudWatch, Datadog

Concepts: Distributed Systems, Fault Tolerance, Event-Driven Systems, Payment Integrations, Microservices

Publications

- Authored **4 technical articles** on GeeksforGeeks (cr7-bullet).

Certifications

- LinkedIn Certifications: **2 Java, 2 Database, 1 Python**

Education

B.Tech in Computer Science

2016 – 2020

LNMI Institute of Information Technology, Jaipur, India
