Experience & Projects

Rakuten Group, Tokyo, Japan

May 2025 – Present

Senior Software Engineer (Design Lead)

Payment Gateway System | RAG Agent, AWS, Spring, Python, Aurora MySQL, Jenkins,

- Built RAG agent for QAs that converts Test specs documents into automated test payloads using Rakuten LLM + Google ADK
- Designed and implemented auto-cancel batch functionality from scratch for Rakuten Card's Barcode and QR payment methods.
- Upgraded cipher suite from AES/CBC to AES/GCM and rotated AES keys per NIST guidelines and PCI DSS compliance.
- Improved CI/CD Pipeline, by upgrading OWASP Dependency check to 12.x.x and by resolving critical vulnerabilities from Dependency Check and PMD, and worked with security team for the codebase vulnerability mitigation guidelines

TakeMe k.k. , Tokyo, Japan (payments startup with 20 employees)

Aug 2022 – May 2025

Full Stack Software Engineer (A2 Level)

Docomo (ドコモ) Pay Integration: TakeMe Pay | AWS, React, SpringBoot, GO

- Integrated Docomo Pay APIs into gateway, contributing to **5.2%** of platform revenue. Interpreted **Japanese Docomo API** documentation.

Restaurant Booking System: [TakeMe Concierge](#) | AWS, Angular 16, Tailwind, SpringBoot, Thyme leaf

- Build the frontend for a B2C booking system from scratch with cross-browser compatibility for IOS11+ and Android 8+. MVP/POC : In 3months , Production release : 5months. GMV after 12months : 12Million Yen / month
- Developed an invoice generation system using thymeleaf , springboot, storing and private retrieval from S3 via API servers and not CDN.
- Improved Core Web Vitals (LCP) by implementing AWS Lambda (Go) for multi-resolution image generation and skeleton loading.

Delhivery Ltd., India

Jun 2020 – Aug 2022

Senior Software Engineer

Last Mile Delivery: RETURNS Microservice | Django, Postgres, AWS, Kafka, GO, DynamoStreams

- Scaled service to handle 4x data load by Improving warehouse dispatch and package scan APIs performance by 70% using optimized SQL queries, parallel processing and reducing redundant meta data in Database by 30%.
- Served as SinglePointOfContact for RETURNS, created UML and AWS architecture diagrams.Implemented POC, to demonstrate materially higher throughput, faster lambda cold starts, using Go 1.x over Django on AWS Lambda for scan-processing workloads.
- Developed an OTP-verified delivery system supporting electronic proof of delivery documents for audit.

Virtual Number Calling System: CALL MASKING | GO, Redis, AWS

- Developed secure, private calls using virtual numbers.
- Implemented fallback logic using Redis pipelines, boosting call connection rate by 85%.

Technical Skills

Languages: Java, TypeScript, Python, C++, GO

AI: GoogleADK

Databases: DynamoDB, Redis, MySQL, PostgreSQL

CI/CD: Github Actions, Jenkins

Cloud: AWS

MessagingQueue: Kafka, SQS, DynamoStreams

Monitoring/Testing: PyTest, JMeter, Cypress,Celery, Datadog

Frameworks: SpringBoot, Django, Angular, React

Certifications And Publications

4 Articles, 2 Collaborations : C++[GFG Competitive Programming](#)

Certifications: 5 (SQL, JAVA, python) [link](#)

Education

B.Tech in Computer Science and Engineering

LNM Institute of Information Technology, India

2016 – 2020
